## Aims

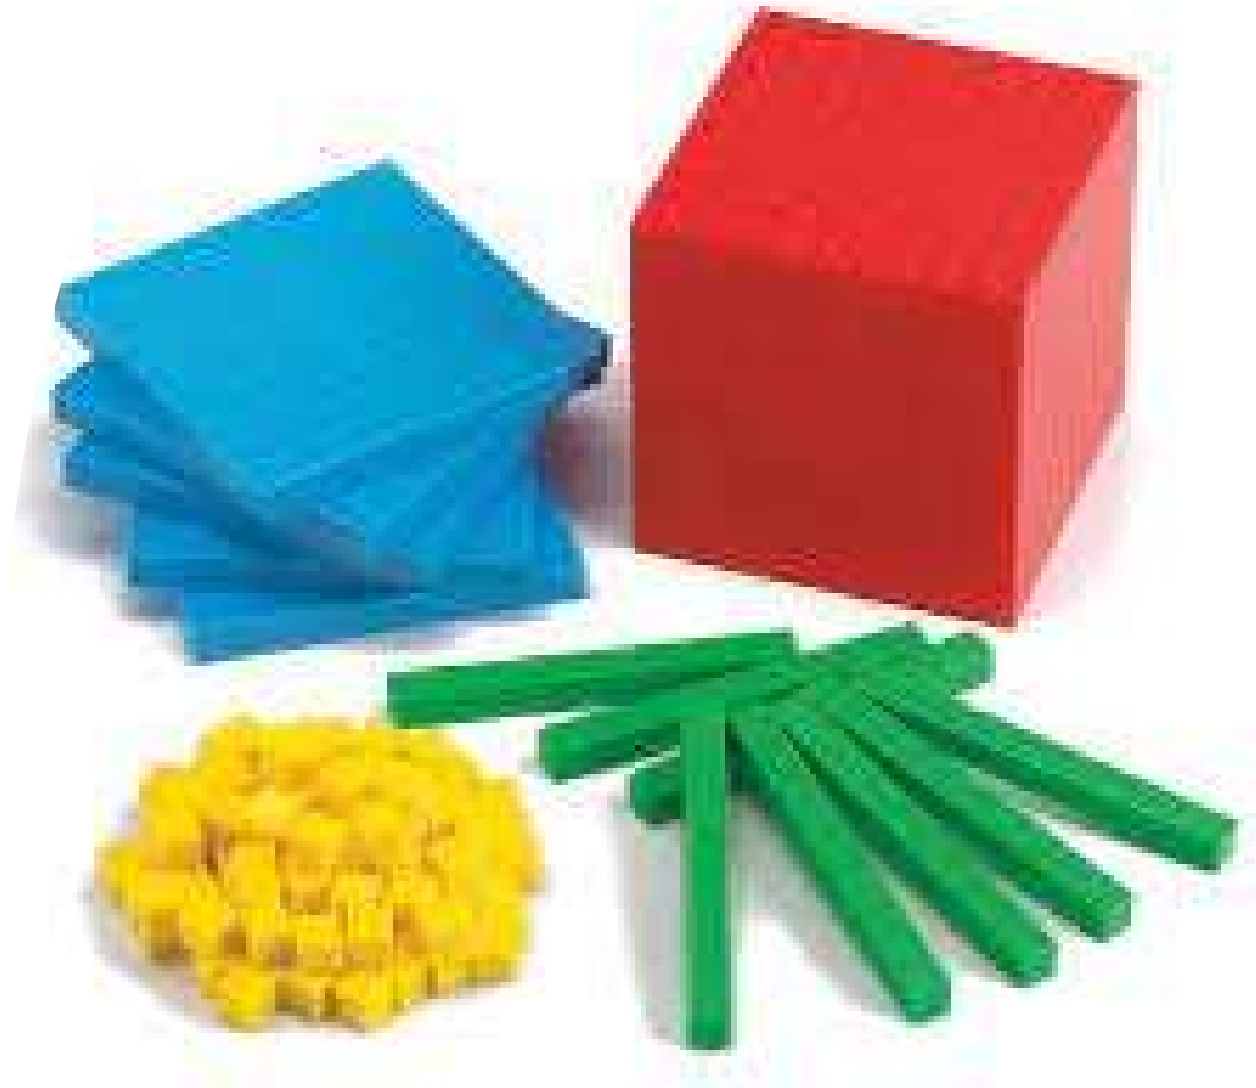

We value a creative and engaging Maths curriculum which allows children to make progress in every lesson through small steps which build up to bigger concepts within the topic.

---

Children become confident Mathematicians through using representations to help them understand mathematical structure.

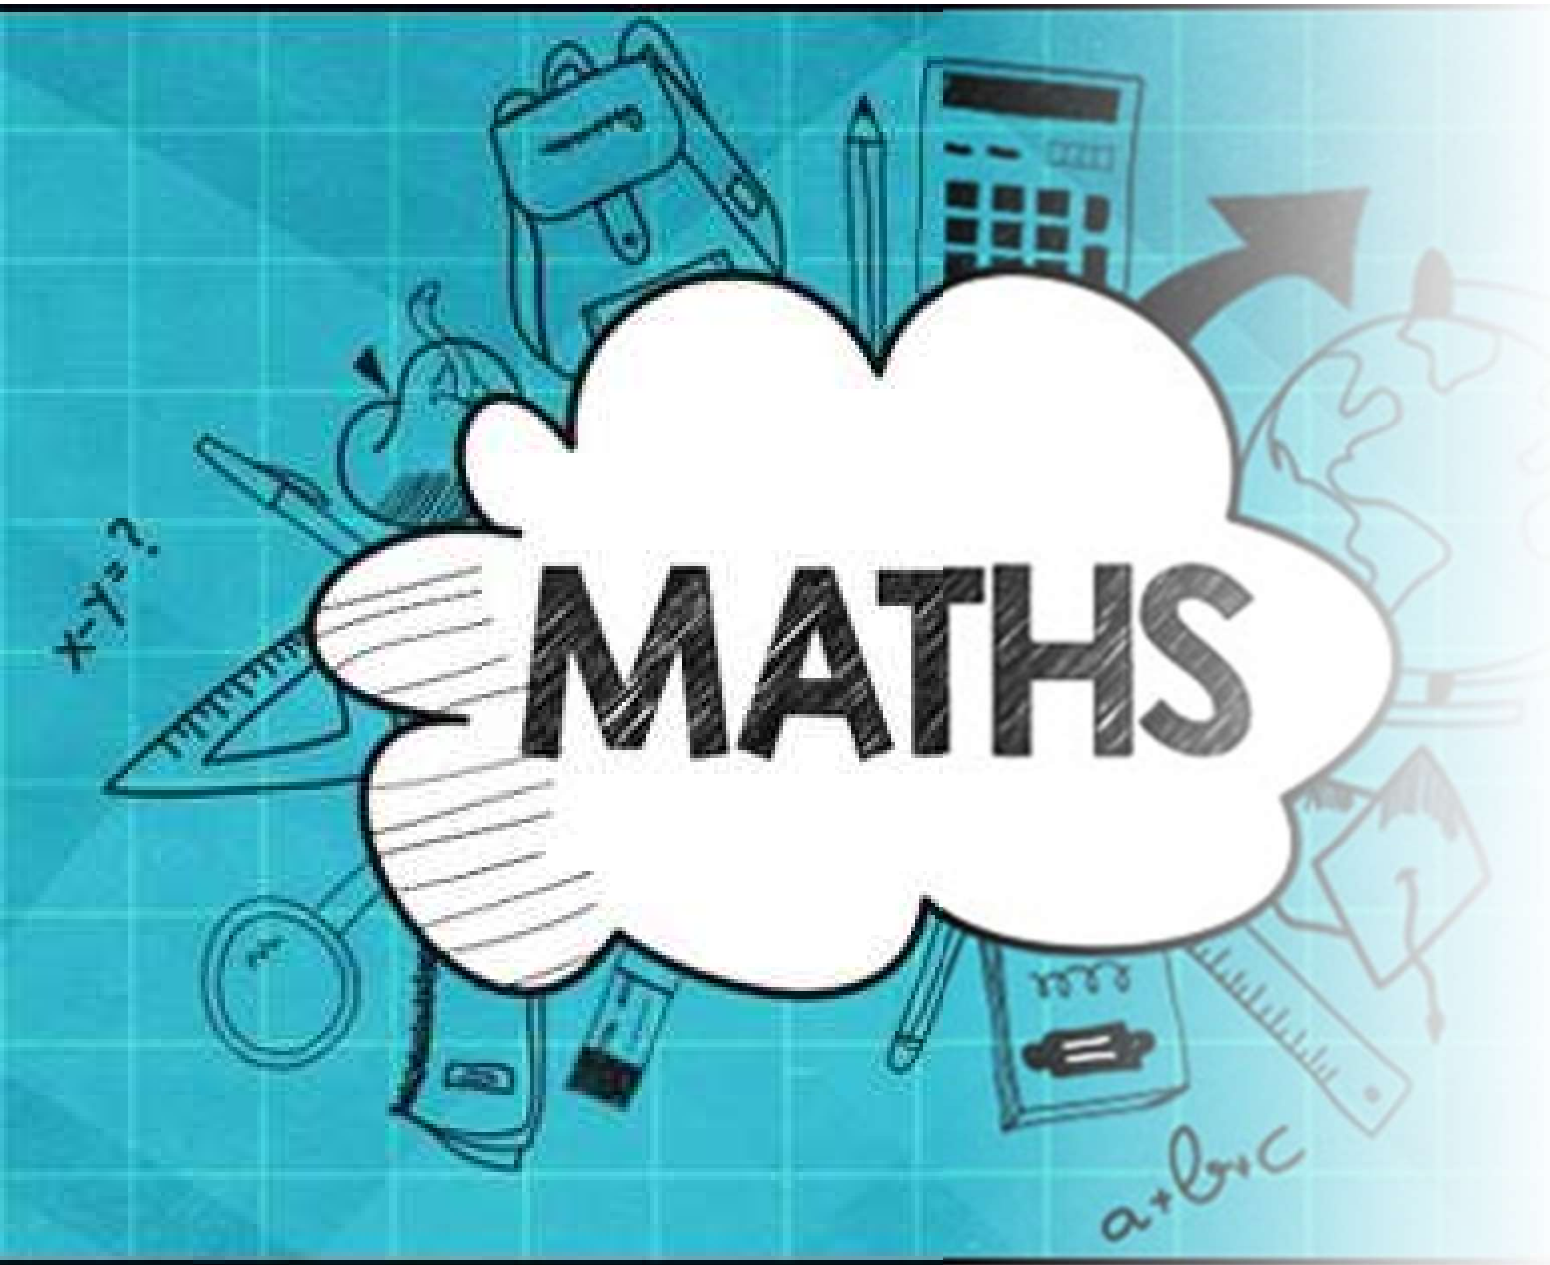

Children are enabled to explore Maths collaboratively with other pupils. They are encouraged to make rich connections across areas of Maths through reasoning, discussion and problem solving.

---

Quick and efficient recall of facts is encouraged and children are able to apply these flexibly across the curriculum.

Maths is the foundation for understanding the world and we teach our children the purpose behind their learning and encourage them to apply this within their daily lives.

Developing an enjoyment of and raising the attainment of children in Maths unlocks the door to future study and career opportunities and raises ambitions.
